Ticket No1 - Create a New Vnet - vnet-dhondhu

Ticket No2 - Create a New Vnet - vnet-tondu

b17-terraform-showoff

C3 ke baad C5 hona chahiye

C3 ke baad C4 hona chahiye

C5 aur C4 dono chahiye
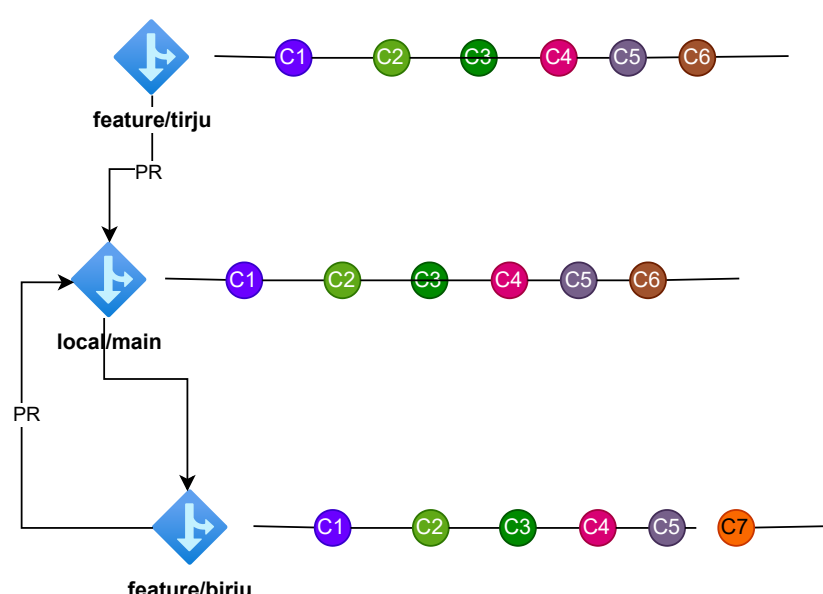

git pull - remote repo se code khaichne ke laega... aur usko local repo me rakhega..

git pull = fetch + merge

Git pull remote changes leke aaega and current working area me merge kar dega..

ek branch se dursi branch me merge karna hai to command use hoga - **git merge**

jis branch me merge karna hai... pehle usme jaenge aur fir command chalange

git merge <jisme se merge karna hai>

git merge main

sonu → monu ★

Conflict Resolution (jab ek branch se dusri branch me hum merge karte hai aur kuch gadbad hoti hai)

1. Take git pull in all branches

2. git merge command =
jis branch me merge karna hai us branch me jaenge,
aur branch me jake git merge <dusri branch>

3. git add .

4. git commit -m "fixed conflicts"

5.git push

Git ke Interview Sawal
Git and Github ka difference
Requirement - Policy Kaise set karenge?
Requirement - Ek resource group add kaise karenge best way se?
Requirement - PR kaise raise karenge, Reviewer kaise set karenge?
Conflict kya hota hai aur kaise resolve karte hai?
git pull, git fetch aur git push me kya andar hai
commit history kaise check karte hai? git log
stash and reset?
PR, branch create, policy apply on branch, Approval process, Conflict Resolution
Branching Strategy kya hoti hai?
Cherry Pick kya hota hai?
git rebase - pura commit history ka band bj jata hai islie git merge hi use karte hai
git rebase kya hota hai?
git fork kya hota hai?
git squash/ git tags
How to revert a git commit?
How to edit the git commit message? - answer --amend in git commit command
Git HEAD

HEAD is pointer that points to a commit id
